DATA ANALYST HIGHLIGHTS

Data Analyst with 2 years of experience delivering end-to-end data analysis including data cleaning, SQL querying, dashboard development, and predictive modelling across engineering, procurement, and EV infrastructure projects.

- Improved forecasting accuracy by 18% by developing end-to-end analytical pipelines in Python and SQL, analysing 1000+ sales and operational records to uncover revenue trends, churn drivers, and EV charger utilisation patterns.
- Reduced reporting turnaround time by 40% by designing interactive Power BI and Tableau dashboards with automated KPI tracking and dynamic filtering, enabling real-time performance monitoring and data-driven planning.
- Developed a data-driven EV Charging Navigation system, processing 1000+ geospatial data points to optimise charging station recommendations, identifying high-demand zones with insufficient coverage, improving route consistency and reducing estimated user travel distance through smarter route planning.

TECHNICAL SKILLS: Power BI | Tableau | SQL | Python | Excel | Microsoft Azure | Visual Studio Code | Git | Pandas | NumPy

EDUCATION

DEAKIN UNIVERSITY

Master's in Data Science

MELBOURNE, VIC

June 2023 - July 2025

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

Bachelor Of Mechanical Engineering

CHENNAI, INDIA

August 2018 - May 2022

NOTABLE PROJECTS

GRAD CAREERS

Data Analyst

MELBOURNE, VIC

October 2026 – February 2026

- Improved reporting accuracy by 30% by transforming and cleaning 10,000+ sales records using XLOOKUP, IFERROR, data validation, and Pivot automation, enabling faster identification of revenue trends and margin performance.
- Enabled targeted retention strategies by building interactive Power BI dashboards using RFM analysis and DAX measures to segment customers by spend, recency and frequency, helping identify high-value and churn-risk groups.
- Improved demand forecasting accuracy by 18% by developing and validating regression models (Linear Regression, Random Forest) in Python, analysing historical sales data to identify seasonal trends and demand shifts, enabling more reliable inventory planning.
- Identified a 12% profit variance across product categories by writing optimised SQL queries (JOIN, GROUP BY, Aggregations) to extract, aggregate, and validate transactional data, standardising records into a single source of truth and enabling targeted cost optimisation strategies.

DEAKIN CAPSTONE PROJECT | EV Charging station Navigation & Accessibility

Data Analyst

MELBOURNE, VIC

July 2024 - September 2024

- Designed and implemented a data-driven navigation solution to identify optimal EV Charging stations between origin and destination using Python-based analytical logic, processing 1000+ route and station data points to generate accurate charger recommendations.
- Analysed and filtered geospatial and structure datasets to evaluate distance, accessibility, and routing constraints, reducing manual route evaluation effort by 40% through automated decision logic.
- Validated navigation logic across 20+ simulated travel scenarios, identifying and resolving distance miscalculations and charger ranking inconsistencies, resulting in improved route accuracy and more consistent station recommendations.
- Optimised charger recommendation efficiency by implementing distance threshold logic availability based filtering criteria, reducing redundant station suggestions by 25% and improving recommendation relevance across simulated travel routes.

DEAKIN CAPSTONE PROJECT | Applied Data Analysis & Visualisation

Data Analyst

MELBOURNE, VIC

March 2025 - June 2025

- Conducted end-to-end data analysis on real-world datasets by performing data cleaning, transformation, and EDA using Python (Pandas, NumPy) and SQL, improving data quality and usability by 30% after preprocessing.
- Analysed datasets containing 10,000+ records to identify trends, patterns, and anomalies using descriptive and statistical techniques, supporting data-driven insights aligned with business-style questions.

- Developed interactive Power BI dashboards and Excel reports using Power BI and Excel, summarising 5-8 key metrics and KPIs to improve insight clarity and stakeholder interpretability.
- Automated KPI calculation workflows using SQL aggregations and Excel-based validation checks, reducing manual reporting effort by 30% and improving consistency in performance tracking outputs.

EXPERIENCE

TRINITY MANOR AGED CARE

Environmental Services Assistant

BALWYN, VIC
March 2024 – Present

- Delivered through daily cleaning and sanitation of resident rooms, corridors, lounges, dining areas, and utility rooms across a multi-floor residential aged care facility, upholding strict healthcare hygiene and infection-control standards.
 - Executed systematic high-touch surface disinfection of door handles, handrails, light switches, and medical equipment across 20+ designated zones daily, ensuring a safe and fully compliant environment for residents and staff.
 - Coordinated complete laundry operations including collection, sorting, washing, and redistribution of resident linen and personal clothing, strictly maintaining cross-contamination prevention protocols throughout the process.
 - Conducted schedule deep cleaning of kitchens, bathrooms, windows, floors and common areas across multiple wings including dining rooms, corridors, and elder suites, directly supporting facility hygiene standards and resident wellbeing.
 - Maintained accurate daily compliance records by completing and initialing cleaning checklist upon task completion, demonstrating strong accountability and adherence to Trinity Manor’s Safe Environment procedures across all assigned areas.
-

FUJI TECHNICAL SERVICES

Procurement & Operations Analyst

MUMBAI, INDIA
September 2022 - May 2023

- Conducted end-to-end analysis of 50+ government tenders through structured cost modelling, BOQ preparation, and compliance validation, improving pricing accuracy and strengthening competitive bid positioning.
- Evaluated 3-5 vendor quotations per tender using structured comparison of pricing, quality, delivery timelines, and payment terms, supporting cost optimisation and improving procurement decision accuracy.
- Developed detailed financial BOQs and tender documentation, ensuring 100% technical qualification and improving bid accuracy and competitiveness.
- Reduced procurement costs by analysing historical pricing data and vendor quotations to establish negotiation benchmark, achieving 10-15% savings across multiple procurement cycles.
- Maintained structured procurement and logistics tracking data, including purchase orders and dispatch timelines, improving cross-team coordination and reducing delivery tracking gaps to support timely project execution.
- Developed and maintained AutoCAD technical drawings and documentation for EMD and ALCO railway spares, enhancing data traceability and version control.
- Supported multi-site project execution and reporting for clients including Indian Railways, Cochin Shipyard, NPCIL, BEML, enabling clear operational tracking across locations.
